Be Unavoidable - Project Progress & QA Resolution Report

Date: March 16, 2026

1. Overview

This report maps the issues identified in the **QA Testing Report — Round 2** to their respective technical solutions and current status. The platform has undergone significant stabilization to ensure a reliable user experience across all modules and assessment tools.

---

2. QA Issue & Resolution Mapping

Critical Issues

🚩 **Issue: Personality Assessment Report Not Generating**

- **Description:** Assessment would conclude with "Give me a moment...", but the final report would not render.
- **Solution Fix:**
  - Implemented a robust JSON extraction layer that strips AI-specific formatting (backticks, markdown tags).
  - Added a retry mechanism (`attemptDebrief` logic pattern) to ensure the API response is parsed correctly even if malformed on the first pass.
  - Fixed the `localStorage` sync to ensure the profile is saved and retrievable upon page refresh.
- **Status:** ✅ Fixed & Verified

Functional Bugs

🚩 **Issue: Back to Dashboard Navigation Missing**

- **Description:** Users were "stuck" in modules or roleplays with no way to return to the main dashboard.
- **Solution Fix:**
  - Injected a global persistent navigation button (`.bu-dash-btn`) into all sub-pages.
  - Standardized the header in roleplays to include a "Dashboard" link.
- **Status:** ✅ Fixed (Global Implementation)

🚩 **Issue: Self-Advocacy Roleplay — Start Button Not Visible**

- **Description:** The start button was missing or hidden on `self-advocacy.html` .
- **Solution Fix:**
  - Fixed CSS visibility logic and ensured the button state updates correctly when a scenario is selected.
  - Standardized the `start-btn` class across both Sales and Self-Advocacy engines.
- **Status:** ✅ Fixed

🚩 **Issue: Self-Advocacy Roleplay — User Text Not Visible**

- **Description:** User input text was appearing as white-on-white, making it unreadable.
- **Solution Fix:**

- Forced user message bubbles to use `#000000 !important` text color in the local CSS block.

- **Status:** ✅ Fixed

🚩 **Issue: Self-Advocacy Roleplay — Debrief Inconsistent**

- **Description:** Debrief would sometimes fail on the first click or produce errors.
- **Solution Fix:**
  - Integrated the `attemptDebrief` controller which cleans raw AI output and handles retries automatically.
- **Status:** ✅ Fixed

🚩 **Issue: Training Modules — Get AI Feedback Not Working**

- **Description:** Buttons in Modules 1–8 were non-functional.
- **Solution Fix:**
  - Updated the `callAPI` function to use the correct model (`claude-3-5-sonnet-20240620`) and ensured backend proxy routes matched frontend calls.
- **Status:** ✅ Fixed

Features & Infrastructure

🚩 **Issue: My Account Page**

- **Description:** No way for users to view or update account details.
- **Solution Fix:**
  - Developed and launched `account.html` .
  - Integrated with the `/api/verify` session check to display current user data.
- **Status:** ✅ Deployed

🚩 **Issue: Stripe Integration & Security**

- **Description:** Need for secure payments and repository privacy.
- **Solution Fix:**
  - Created `api/stripe-checkout.js` and `api/stripe-webhook.js` .
  - Implemented automated Auth Guards across all 14+ protected pages via `inject-auth-guard.js` .
  - Hardcoded secrets were removed and moved to environment variables for GITHUB PUSH PROTECTION compliance.
- **Status:** ✅ Completed & Secure

---

3. Summary of Solved Issues (Consolidated)

Issue	Status	Resolution
Auth Bypassing	FIXED	Global Auth Guard injection applied.
Mobile Layouts	FIXED	Responsive grid collapses implemented for all modules.
AI Parsing	FIXED	Regex-based JSON cleaning + Retry logic added.
Dark Theme Reset	FIXED	Reverted Modules to high-contrast "light-premium" theme.

Payment Sync	FIXED	Webhook-to-Postgres automated user status updates.
Login Redirect	FIXED	Resolved a critical loop caused by erroneous DB queries in verify.js.
Stripe Success	FIXED	Added polling to dashboard.html to reflect payment status immediately after checkout.
